SKILLS

Languages : C++, Javascript

Tools : Github, Postman

Library & Framework : Reactjs, Nodejs, Expressjs, Tailwindcss

Database: Mongodb, MySQL

EXPERIENCE

MERN Developer

oct,2025 – may,2026

Sosiyo, Vadodara

- Implemented centralized billing workflows, cafe POS integration, printable receipts, customer history parsing, and dashboard analytics for operational efficiency.
- Engineered a desktop billing and session management system for a kids activity center, supporting 15–20 concurrent active play sessions with dynamic timer-based billing and real-time session tracking.
- Collaborated on the Astrum AI brand website by developing modern responsive interfaces and delivering production-ready features aligned with client requirements and timelines.

OPEN SOURCE CONTRIBUTIONS

SMRITI AI (Next.js + TypeScript) | [PR Link](#)

- Contributed to a production-grade Next.js application using TypeScript in a collaborative open-source environment.
- Resolved backend validation issues by implementing duplicate username and phone number checks, improving data consistency and reliability.
- Enhanced frontend user experience through real-time form validation and interactive feedback mechanisms.

PROJECTS

Alumni Association Portal | Node.js, Express.js, MongoDB, React.js | Github | Live

- Worked as the primary developer in a team-based project, leading the implementation of core frontend and backend functionalities using React.js, Node.js, Express.js, and MongoDB.
- Developed 20+ REST API endpoints for authentication, post sharing, job postings, mentorship, donations, and event management while following scalable backend architecture principles.
- Built a real-time mentorship chat system using Socket.IO and JWT-based authentication, enabling secure and instant communication between students and alumni.
- Designed role-based access control, admin verification workflows, and optimized MongoDB queries through efficient schema design and indexing to improve performance and maintainability.

Banking Ledger Backend System | Backend Project | [Postman Collection](#) | [GitHub](#)

- Designed and developed a secure banking ledger backend system for account management, balance tracking, and financial transaction processing.
- Implemented ACID-compliant fund transfers using MongoDB transactions and sessions, ensuring transactional consistency during concurrent operations.
- Built a double-entry ledger architecture with idempotent transaction handling to prevent duplicate processing and maintain accurate financial records.
- Improved backend reliability and security through database indexing, token-based authentication, TTL indexes, and optimized schema design for efficient query execution.

ACHIEVEMENTS

- Finalist – Odoor Hiring Hackathon 2025 (Selected among top 105 out of 2000+ participants)
- Solved 400+ DSA problems across LeetCode and GeeksforGeeks.
- Rank 7 in GeeksforGeeks Problem-Solving (University level)

EDUCATION

ITM Vocational University, Vadodara

B.Tech – CSE

2022 – 2026

CGPA: 9.0/10
